MetalSkinPanic Arm 1

- Punched/pressed steel plating
- Reduce chassis weight
- Reduce load on articulation motors
- Better cooling of motors
- Allows for bolts & fasteners to be placed in other configs for different loadouts

Punch/Press Plating Reference

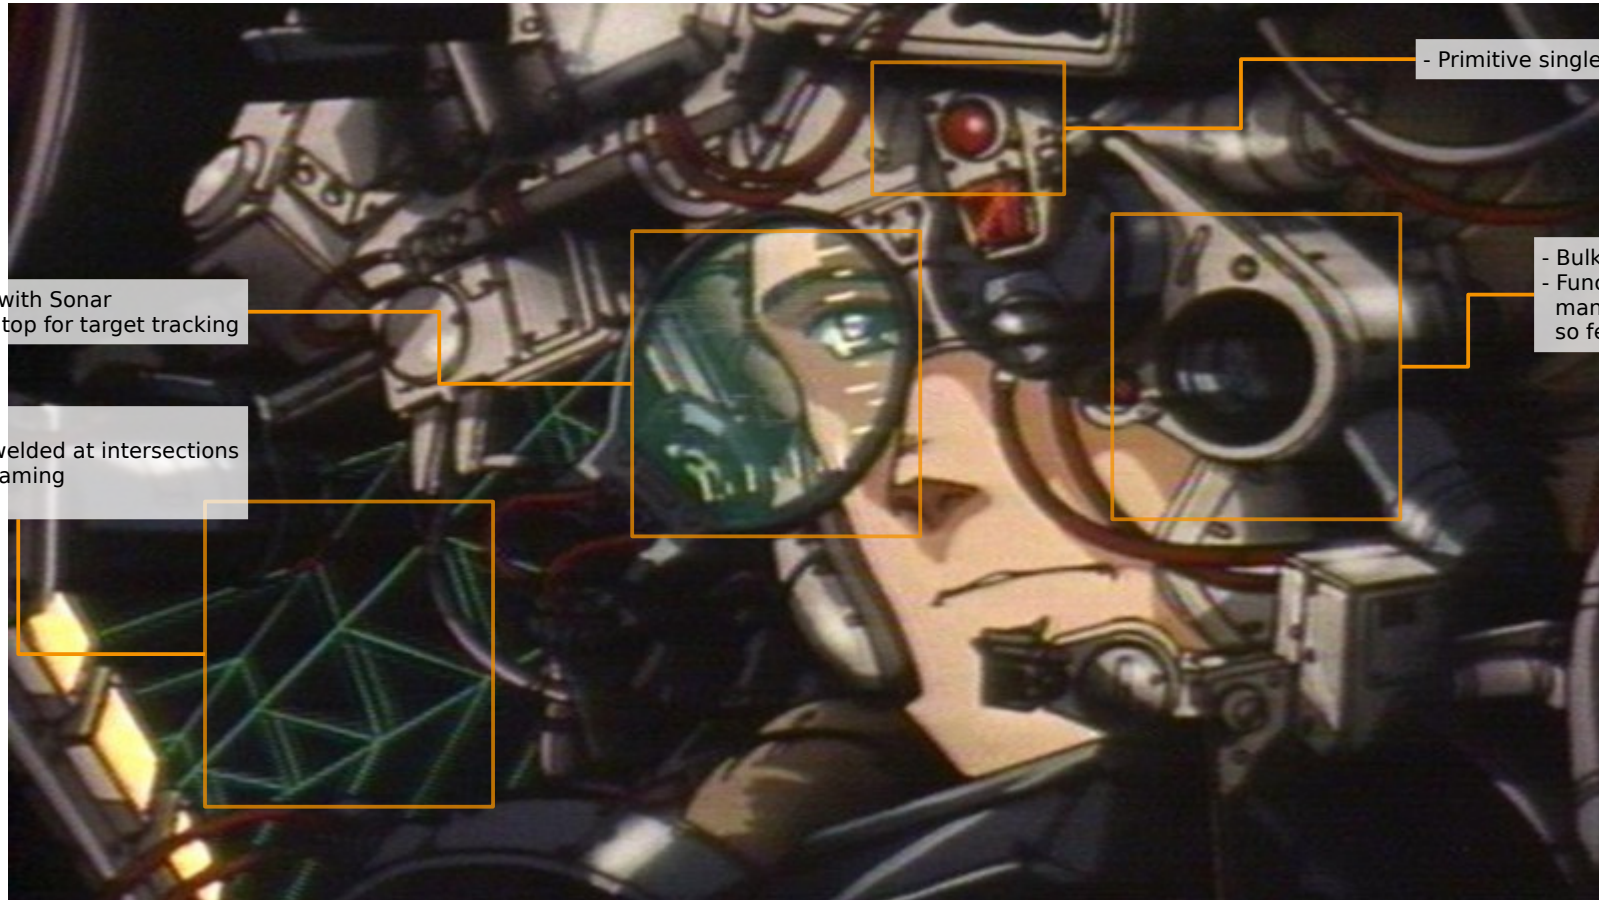

- Hydraulic lines for articulation
- Oil lines/grease ports at joints

- Flush Rivet fasteners
- Primitive shapes
- Complex parts are multiple primitives fastened together
- No CNC machined parts, only cut, formed, cold roll
- Wrist articulates in one axis

- Hydraulic pumps for articulation
- Expensive/easy breakdown requires armor plating

MetalSkinPanic HUD

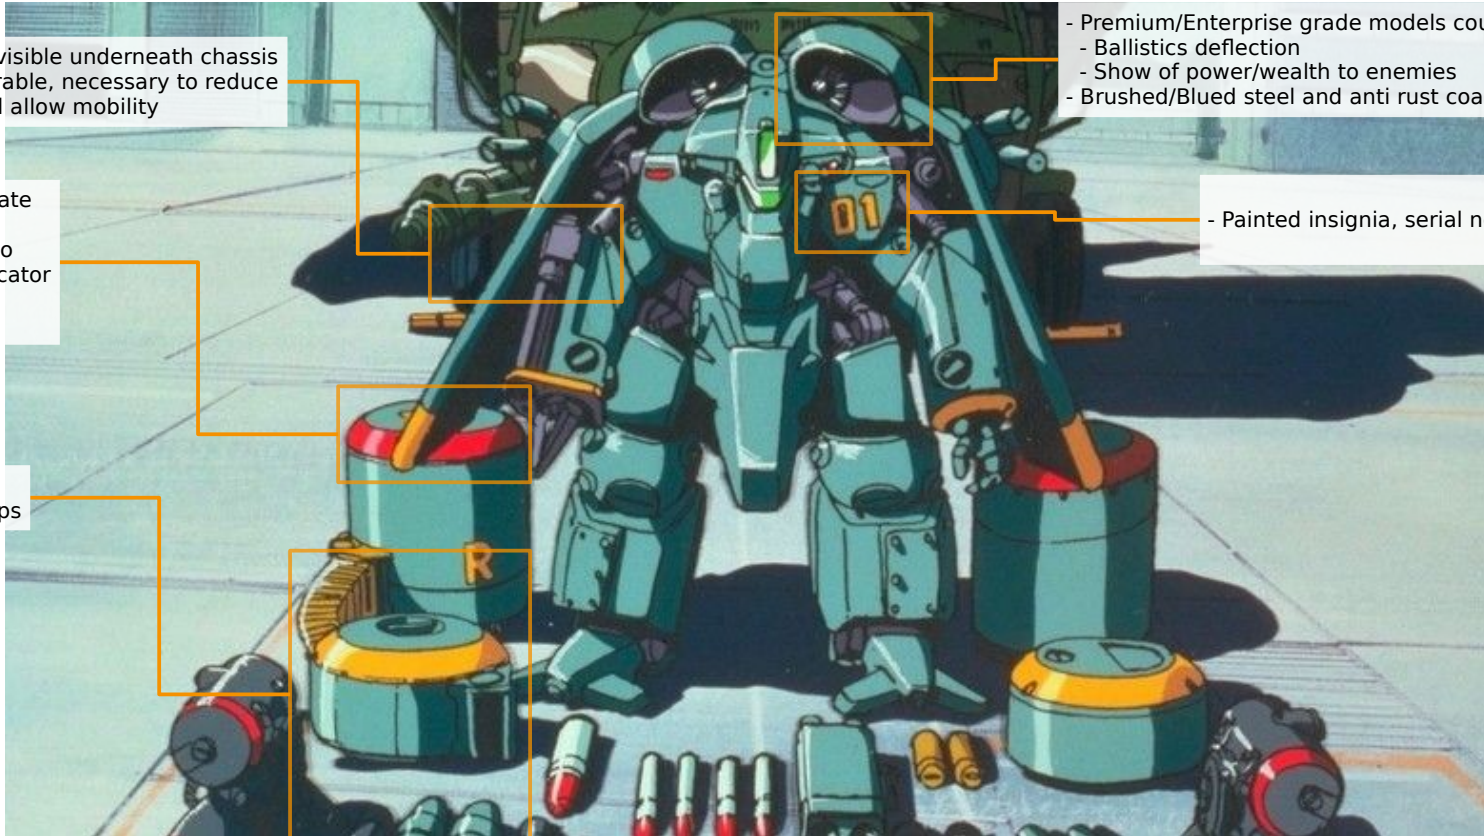

- Transparent lens with Sonar
CRT projected on top for target tracking

- Scaffolding gets welded at intersections
- Lightest weight framing

- Primitive single LED for status indicators

- Bulky Telephoto lens
- Function over form, industrial
manufacturing was still early
so features were larger

MetalSkinPanic Maddox Suit

- Internal framing visible underneath chassis
- Hydraulics vulnerable, necessary to reduce frame weight and allow mobility

- Red/Orange paint to indicate warnings
- "This Side UP" on ammo
- Wing tips as visual indicator to prevent collisions
- Back blast zone

- Belt Fed ammunition
- Basic Cylinder with radius caps

- Premium/Enterprise grade models could afford formed chassis
- Ballistics deflection
- Show of power/wealth to enemies
- Brushed/Blued steel and anti rust coating

- Painted insignia, serial no., company affiliation

MetalSkinPanic Arm 2
